

RELAX GLASS 1200 Watt infrared heater with short-wave and ceramic glass SCHOTT NEXTREMA®

With our brand new RELAX GLASS 1200 watt heaters, we offer you the top heating solution for bathrooms.

HEAT meets FUNCTIONALITY and DESIGN

- **RELAX GLASS 1200W** heaters are particularly suitable for bathrooms and wet areas, as they are **waterproof** with an IP65 rating.
- A big advantage of the compact heaters is the **immediate intense heat** thanks to infrared shortwave (IR-A). Medium and long wave radiators require a certain lead time to generate heat with less output. The RELAX GLASS shortwave emitter, on the other hand, delivers instant heat at the push of a button.
- Thanks to the high-quality ceramic-glass cover SCHOTT NEXTREMA®, the **red light emission of the heating tube is strongly reduced** and contributes to a warm ambience.
- For each bathroom design, the **optically suitable heating solution** with either a white or black glass front in a silver or black housing.
- **Wall and ceiling mounting or flush-mounted installation - the choice is yours.** Our standard models are equipped with mounting brackets for walls and ceilings. For flush-mounted ceiling installation we offer our **FRAME variants** either black or silver-colored steel frames including a mounting system.
- **Easy control - also with remote.** The RELAX GLASS 1200 can either be connected to a switch or is alternatively available with a single-stage remote control (ON / OFF) and integrated timer (1 hour).
